

NATIONAL MEET • HYBRID MODE

SERI-By Product Meet - 2026

*National Meet on Sericultural By-products for
Entrepreneurship & Sustainable Technologies*

**Organized by CSB – Central Muga Eri Research & Training Institute,
Lahdoigarh, Jorhat, Assam – 785700**

About the Meet

Sericulture generates a wide spectrum of valuable by-products from host-plant, silkworm rearing, reeling, spinning and post-cocoon operations — sericin, fibroin, pupae, pupal oil (Omega 3), moth, unutilised biomass and bioactive compounds. With appropriate processing and quality assurance, these can be transformed into high-value food, feed, nutraceutical, biomedical, cosmetic, agricultural, environmental and industrial products.

The meet provides a multidisciplinary forum to share scientific advances, scalable technologies, safety and standardisation requirements, business models and market pathways — connecting research institutions with entrepreneurs, start-ups, farmer-producer organisations and industry.

Key Objectives

- 01 Identify promising by-products, technologies and product opportunities.
- 02 Promote scientific collaboration, technology transfer and industry partnerships.
- 03 Address processing, safety, quality, standardisation and shelf-life requirements.

By-products gallery

Expected Outcomes

SERI-BEST 2026 seeks to establish a Collaborative platform connecting research institutions, entrepreneurs, start-ups, farmer-producer organizations, industries, and policymakers to transform underutilized sericultural biomass into innovative products, sustainable enterprises, and employment opportunities.

Themes

Food, Feed and Nutraceutical Applications of Eri, Muga and Tasar By-products

Processing, waste-to-wealth, commercialization and circular economy

Value Addition and Enterprise Opportunities in Mulberry Sericulture By-products

Food, feed, nutraceutical and functional product development

Sustainable Utilization and Commercial Potential of Sericulture By-products

Biomedical, nano materials, pharmaceutical, cosmetic and non-textile applications, and biofuels

Innovative Healthcare, Industrial and Non-Textile Applications

Processing, quality, entrepreneurship and market development

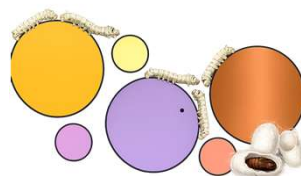

The meet will promote resource efficiency, value addition, waste minimization, and circularity across the sericulture value chain while contributing to sustainable rural development and a resilient bioeconomy.

Cross-cutting Focus Areas

- Sustainable technologies and green innovations
- Technology transfer and extension strategies
- Commercialization of research outcomes
- Circular bioeconomy and climate-resilient sericulture
- Industry-academia-farmer collaborations
- Capacity building and skill development
- Rural entrepreneurship and livelihood enhancement

Program Highlights

KEY NOTE ADDRESS

Inspiring insights from eminent scientists and policymakers on sericultural by-product utilization

PANEL DISCUSSIONS

Discussions on entrepreneurship, market linkages and circular bioeconomy with industry experts.

TECHNICAL SESSIONS

Insights on food, feed, nutraceutical, biomedical and non-textile applications of Vanya & mulberry by-products.

EXHIBITION

Explore innovative by-product technologies and connect with entrepreneurs, start-ups and industries.

START-UP / INNOVATION

Start-ups and innovations on sericultural by-products to be discussed in a dedicated session.

SERI-BEST 2026

National Meet on Sericultural By-products for Entrepreneurship & Sustainable Technologies

Join us for an enriching event exploring innovative opportunities for the sustainable utilization and value addition of Vanya and mulberry sericultural by-products, fostering new avenues in animal nutrition, human food, healthcare, and allied industries.
